Good Morning

I am Mauro Donadeo and I am writing in response to your advertisement on Linkedin (April 8, 2013) seeking a software application developer (Padova).

As you will see on my enclosed resume, I have three years of experience working with low cost devices for the acquisition of depth images and color images (i.e. Asus Xtion or MS Kinect). First with my thesis and then with my involvement in two projects for gesture recognition, I could develop just the kind of capabilities I think you are looking for. The first project in which I worked was developed within the CEEDs European Project, aimed at the recognition of body gesture during the exploration of a virtual reality environment. I also took part in the development of a library for the recognition of hand gestures, always thank to the MS Kinect.

I have a great interest for the entire field of IT technologies and I'd like to improve my knowledge to always be up to date. So, it would be really a pleasure for me to work for an important and technologically excellent company as yours.

I hope to arrange an interview to discuss my qualifications and the way I could enhance your company.

Thanks for the consideration,

Best regards

Mauro Donadeo
